

Business Leaders to Wisconsin Legislators WE NEED MORE ENGINEERS

CEOs Call for Urgent Action on New UW-Madison College of Engineering Building

To the Wisconsin State Legislature:

As Wisconsin employers, we are deeply disappointed by the decision of the Joint Finance Committee to not include the University of Wisconsin-Madison College of Engineering expansion in the 2023-25 capital budget. The UW-Madison College of Engineering has a significant impact on the state and its workforce. These engineering graduates are vital to the state's economic development needs, but we need more of them to meet the increasing demand from our companies. In the past five years, 1,235 graduates have accepted engineering employment in Wisconsin. In the last year alone, 445 employers recruited engineers through the College of Engineering career fairs, where the number of job offerings far outnumber available students.

A new, state-of-the-art building will provide the college the space needed to educate more engineering students and grow its undergraduate population by 1,000 students. This expansion will enable the university to serve more Wisconsin students and employers and will assist in the recruitment and retention of top-tier faculty members, sustaining its excellence in research and education.

We are asking the state to enumerate this important project during this legislative session. Of the \$347 million total project cost, UW-Madison has committed to raising \$150 million from private gifts and grants. We understand that more than \$100 million in gifts has already been pledged from donors, contingent on state support of the project this session. Delaying this project to the next state budget would increase the total cost to approximately \$400 million, with no guarantee that donor funds will still be available.

Please help us make sure that the state's top engineering program remains competitive for years to come by passing legislation to construct this much-needed new building.
